## ABSTRACT

The Project “**Banking Application in java**” is console based java application. This is somewhat complex Java project which consists of five different classes and is a console-based application. When the system starts the user is prompted with an Account number and password. After entering the details successfully, the functionalities are unlocked and functionalities provide by this application are like Check Balance, Deposit Money, Withdraw amount and exit..

We Can even use this code for web application by adding some additional features Using JDBC and servlets. We are developing Basic code for Banking Application using eclipse. Additionally, this project is to provide additional features to the user's workspace that are not available in a traditional banking project.

# 1 .Introduction

## 1.1 Why this High-Level Design Document?

The purpose of this High-Level Design (HLD) Document is to add the necessary detail to the current project description to represent a suitable model for coding. This document is also intended to help detect contradictions prior to coding, and can be used as a reference manual for how the modules interact at a high level.

The HLD will:

- Present all the design aspects and define them in detail
- Describe the user interface being implemented
- Describe the hardware and software interfaces
- Describe the performance requirements
- Include design features and the architecture of the project
- List and describe the non-functional attributes like:
  - o Security
  - o Reliability
  - o Maintainability
  - o Portability
  - o Reusability
  - o Application compatibility
  - o Resource utilization
  - o Serviceability

## 1.2 Scope

The HLD documentation presents the structure of the system, such as the database architecture, application architecture (layers), application flow (Navigation), and technology architecture. The HLD uses non-technical to mildly-technical terms which should be understandable to the administrators of the system.

## 1.3 Definitions

Term	Description
IDE	Integrated Development Environment

## **2 General Description**

### **2.1 Product Perspective**

The project main goal is to create an online banking system for banks. All banking work is done manually in the current system. To withdraw or deposit money, the user must go to the bank. Today, it is also hard to find account information for people who have accounts in the banking system.

### **2.2 Problem statement**

This project is to provide additional features to the user's workspace that are not available in a traditional banking project. It provides some basic functionalities like check balance, withdraw, deposit money and exit console.

### **2.3 Proposed Solution**

The solution proposed here is a console-based application using Java without manually going to the bank. It provides basic functionality based on the user requirement but this solution is limited to the user console using Eclipse.

### **2.4 Further Improvements**

Our project is limited to only one user working only with the help of console input. Where here we are not using a database to store multiple records of the user and provide service to the multiple user based on the user request. We can even develop this project by using JDBC and we make this project more advanced making it a web-based application using servlets.

### **2.5 Technical Requirements**

As it is a console-based basic project, we may not require much technology. We just require IDE (Integrated Development Environment). So we use Eclipse for providing console-based application.

## 2.6 Data Requirements

We don't require much info externally for the this project we just take username and password as input from the console and perform operation according to the user specification.

## 2.7 Tools used

Java programming language and eclipse.

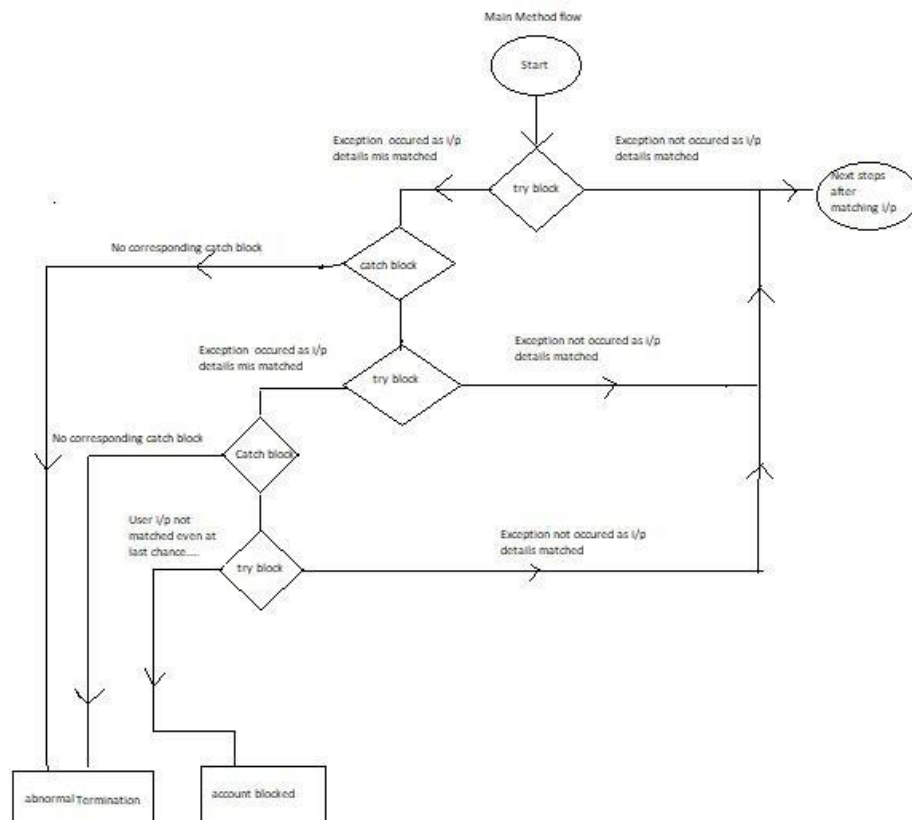

### 3. Design Details

#### 3.1 Process Flow

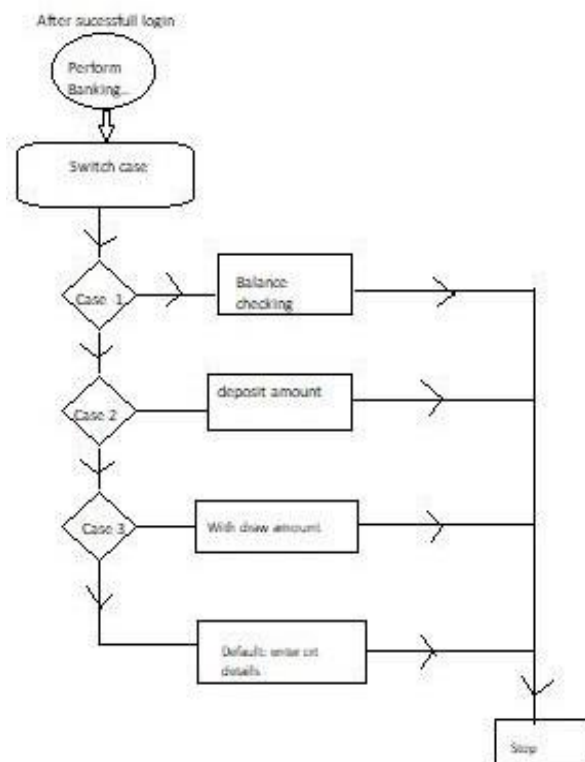

Below is the simple flow diagram for the banking application.

Login Credentials cheacking:

Operation done After success full login :

Balance Checking:

Deposit:

With Draw:

## **4. SYSTEM STUDY AND TECHNOLOGY**

### **4.1 BENEFITS OF ONLINE:**

- Time saving.
- Less paper works.
- Cost efficient.
- More comfortable environment.
- Convenience and flexibility

### **4.2 SOFTWARE REQRIMENTS:**

- Java(Programming Language)
- Eclipse(IDE)

## 5.CODE

```
import java.util.*;
import java.io.*;
public class BankingApplication{
    public static void main(String[] args) {
        int amount=20000;
        final String Accno= "12Ae7b";
        final String password= "Hemasri@11";
        Scanner sc=new Scanner(System.in);
        System.out.println("Enter your
Account number:");
        String AcNo=sc.next();
        System.out.println("Enter your password:");
        String pwd=sc.next();

        if(Accno.equals(AcNo)&&password
.equals(pwd))
        {
            try {
                BufferedReader br
= new BufferedReader(new InputStreamReader(System.in));
                while (true)
                {

                    System.out.println("1. Check
Balance");

                    System.out.println("2. Deposit");

                    System.out.println("3. Withdraw");

                    System.out.println("4. Exit");

                    System.out.print("Enter your
choice:");

                    String
num=br.readLine();
```

```

switch (num)
{
    case "1":
        amount= checkBalance(amount);
        break;
    case "2":
        amount= deposit(amount);
        break;
    case "3":
        amount= withdraw(amount);
        break;
    case "4":
        System.out.println("Thank you");
        System.exit(0);
        break;
    default:
        System.out.println("Invalid
number");
        break;
}
}
catch(Exception e){
    e.printStackTrace();
}
}
else {
    System.out.println("Invalid login

```

```

credentials");
                                System.exit(0);
                                }
                                }

                                private static int withdraw(int
amount) {

                                System.out.println("Enter the
Amount you want to withdraw:");
                                Scanner sc= new
Scanner(System.in);

                                int withdraw =sc.nextInt();
                                if(withdraw<amount)
                                {
                                        amount=amount-
withdraw;

                                        System.out.println(" "+
withdraw+" is withdrawn from your Account");

                                        System.out.println("Current
Available Balance is Rs."+ amount);

                                        return amount;
                                }
                                else
                                {
                                        System.out.println("Low
Balance");

                                        System.out.println("Current
Available Balance is Rs."+ amount);

                                        return amount;
                                }
                                }

                                private static int deposit(int
amount) {

```

```

        System.out.println("Enter the
Amount you want to deposit:");
        Scanner sc= new
Scanner(System.in);

        int deposit =sc.nextInt();
        amount=amount+deposit;
        System.out.println(" "+
deposit+" is deposited into your Account");
        System.out.println("Current
Available Balance is Rs."+ amount);
        return amount;

    }

    private static int checkBalance(int
amount) {

        System.out.println("Available
Balance is Rs."+ amount);

        return amount;

    }

}

```

## 7.CONCLUSION

This Basic console based application which help to perform some basic banking applications like Check Balance,Withdrawing Money and Deposition is efficient and very helpful to the user.
