

# *Banking Application Project (Console based Application)*

## *Wireframe Documentation*

# Homepage

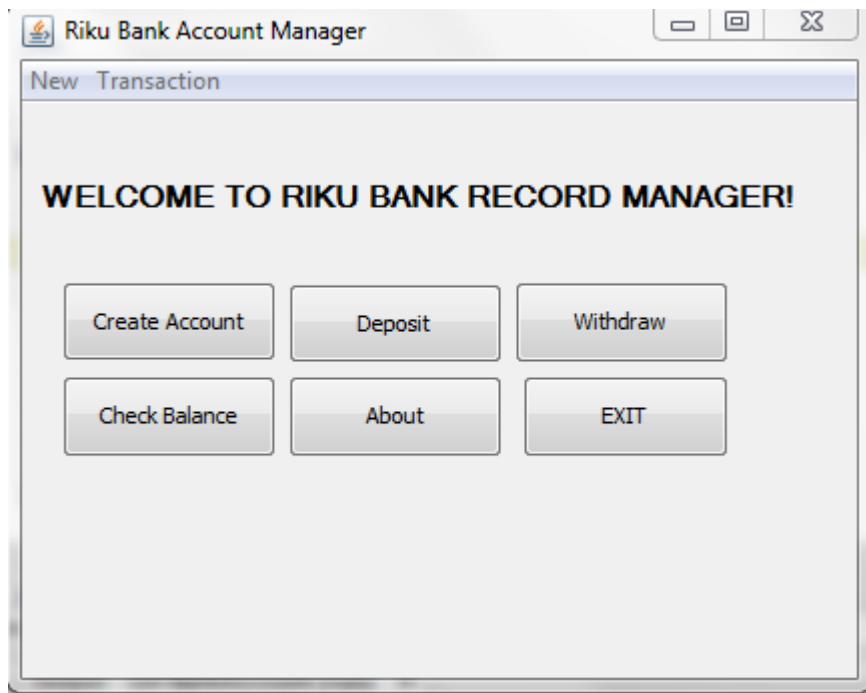

We have divided Banking Application Project Homepage into a Section: -

1. First thing anyone will see is a pop-up window on Homepage which will ask for User Inputs to login into one's account.
2. If the user entered the correct details,he/she will be redirected his/her account and display operations on the console to perform.
- 3.the operations displayed are check balance,deposit,withdraw and exit.
- 4.if the user enters wrong details,he/she will not be able to access the application.

After login,the user is prompted with the operations like check balance

With draw, deposit and exit.The user can select any operation of his/her choice

After the user can perform his/her own operations basing on their need.the sample output after

Performing operations is shown in below diagram.

```
(base) mayanksolanki@Mayanks-MacBook-Air Desktop % javac test.java
(base) mayanksolanki@Mayanks-MacBook-Air Desktop % java GFG
